

Injury Tracking Application (ITA) Case Detail Data Dictionary

Under [29 CFR 1904.41](#), certain establishments with 20 or more employees must submit electronically summary data from the OSHA Form 300A to OSHA, and certain establishments with 100 or more employees in designated high-hazard industries (listed in [Appendix B to Subpart E of 29 CFR Part 1904](#)) are also required to electronically submit to OSHA detailed information about each recordable injury and illness entered on their previous calendar year's OSHA Form 300 Log and Form 301 Incident Report (29 CFR 1904.41). See OSHA's [ITA Tracking Application \(ITA\) information website](#) for more information on what establishments are required to electronically submit data.

OSHA has made most of the data electronically submitted through its ITA publicly available. This Detail Data Dictionary provides information about the fields in the publicly available Case Detail Data set. Each record in the Case Detail Data set has information about a single work-related injury or illness.

Data Element	Definition	Format	Source
ID	A unique number for each record	Numeric	ITA assigned
establishment_ID	A unique number for each establishment. This field can be used to link establishment 300A data to 300/301 data.	Numeric	ITA assigned
establishment_name	The name of the establishment reporting data. [Must be unique to the establishment]	Character	OSHA Forms 300A, 300, 301
ein	Employer Identification Number (EIN) is also known as Federal Tax Identification Number	Character	OSHA Form 300A
company_name	The name of the company that owns the establishment.	Character	OSHA Form 300A
street_address	The street address of the establishment.	Character	OSHA Form 300A
city	The city where the establishment is located.	Character	OSHA Form 300A
state	The state or territory where the establishment is located.	Character	OSHA Form 300A
zip_code	The full zip code for the establishment.	Character	OSHA Form 300A
naics_code	The North American Industry Classification System (NAICS) code for the establishment. Data use a 2012, 2017, or 2022 NAICS code.	Numeric	OSHA Form 300A
naics_year	The calendar year reflecting the version of NAICS codes used by the establishment [2012, 2017, or 2022] When a NAICS code has not changed, the most recent NAICS year is listed. Data submissions with invalid NAICS codes are shown as missing.	Numeric	ITA assigned
industry_description	The industry description for the establishment.	Character	OSHA Form 300A
establishment_type	1 = Private industry 2 = State government entity 3 = Local government entity	Numeric	OSHA Form 300A

Injury Tracking Application

Data Element	Definition	Format	Source
size	The size of the establishment is based on the employer-reported maximum number of employees who worked there at any point in the year. 1 = < 20 employees 2 = 20-249 employees 21 = 20-99 employees 22 = 100-249 employees 3 = 250+ employees Note – code 2 was split to 21 and 22 with the collection of 2023 data.	Numeric	OSHA Form 300A
annual_average_employees	The annual average number of employees at the establishment. Note: This field should not be summed across cases in an establishment.	Numeric	OSHA Form 300A
total_hours_worked	The total hours worked by all employees at the establishment. Note: This field should not be summed across cases in an establishment.	Numeric	OSHA Form 300A
case_number	An employer-assigned case number for each unique case (i.e., injured/ill employee)	Character	OSHA Forms 300 & 301
date_of_incident	The date the incident occurred	Numeric	OSHA Forms 300 & 301
incident_outcome	The most serious outcome that occurred 1=Death 2=Days away from work (DAFW) 3=Job transfer or restriction 4=Other recordable case	Numeric	OSHA Form 300
dafw_num_away	The number of days away from work the employee required to recover from the incident before returning to work	Numeric	OSHA Form 300
djtr_num_tr	The number of days the employee needed to be transferred or reassigned to another job or placed on restricted duty due to the incident	Numeric	OSHA Form 300
type_of_incident	The type of incident that occurred 1=Injury 2=Skin disorder 3=Respiratory condition 4=Poisoning 5=Hearing Loss 6=All other illness	Numeric	OSHA Form 300
time_started_work	The time the affected employee started work prior to the incident	Numeric	OSHA Form 301
time_of_incident	The time the incident occurred	Numeric	OSHA Form 301
time_unknown	Was the time of the incident unknown? 0 = No 1 = Yes	Numeric	OSHA Form 301
date_of_death	The date the death occurred, if applicable.	Numeric	OSHA Form 301
created_timestamp	The date/time the record was submitted to the ITA	Numeric	ITA assigned

Injury Tracking Application

Data Element	Definition	Format	Source
year_of_filing	The calendar year in which the injuries and illnesses being reported occurred at the establishment.	Numeric	OSHA Form 300A
job_description	The job title of the injured/ill employee	Character	OSHA Form 300
SOC_code ¹	The 2018 Standard Occupation Code (SOC) assigned by the NIOSH Industry and Occupation Computerized Coding System (NIOCCS) or OSHA.	Numeric	OSHA assigned
SOC_description ¹	Text description of the 2018 SOC Code .	Character	OSHA assigned
SOC_probability ¹	The score given by the NIOSH Industry and Occupation Computerized Coding System (NIOCCS) for the expected accuracy of the SOC code. Codes that were assigned by OSHA are assigned a SOC_probability of 5.	Numeric	OSHA assigned
SOC_reviewed ¹	Indicator variable as to whether the SOC code was manually reviewed before posting. 0 = Not reviewed, NIOCCS coded 1 = Reviewed by OSHA, NIOCCS and OSHA coded 2 = Not SOC coded (SOC = '9999')	Numeric	OSHA assigned
New_incident_location ²	The location where the incident occurred.	Character	OSHA Form 300
New_incident_description ²	A description of the incident.	Character	OSHA Form 300
New_nar_before_incident ²	A description of what the employee was doing just before the incident occurred.	Character	OSHA Form 301
New_nar_what_happened ²	A description of what happened and how the injury occurred.	Character	OSHA Form 301
New_nar_injury_illness ²	A description of the injury or illness.	Character	OSHA Form 301
New_nar_object_substance ²	A description of the object or substance directly harming the employee.	Character	OSHA Form 301
Nature_code_pred ³	The nature of injury or illness identifies the principal physical characteristic(s) of the work-related injury or illness.	Numeric	OSHA assigned
Nature_title_pred	A narrative description of the assigned nature of injury or illness code.	Character	OSHA assigned
Part_code_pred ³	The part of body directly affected by the identified nature of injury or illness.	Numeric	OSHA assigned
Part_title_pred	A narrative description of the assigned part of body code.	Character	OSHA assigned
Event_code_pred ³	The event or exposure code describes the manner in which the injury or illness was produced or inflicted by the source of injury or illness.	Numeric	OSHA assigned
Event_title_pred	A narrative description of the assigned event code.	Character	OSHA assigned
Source_code_pred ³	The source code identifies the objects, substances, equipment, and other factors that were responsible for the injury or illness incurred by the worker or that precipitated the event or exposure.	Numeric	OSHA assigned
Source_title_pred	A narrative description of the assigned source code.	Character	OSHA assigned

Data Element	Definition	Format	Source
Sec_source_code_pred ³	The secondary source code, if any, identifies the contributing objects, substances, equipment, and other factors not identified as the primary source that led to the injury or illness incurred by the worker or that precipitated the event or exposure when two objects or substances contributed to an event.	Numeric	OSHA assigned
Sec_source_title_pred	A narrative description of the assigned secondary source code.	Character	OSHA assigned

¹OSHA used the NIOSH Industry and Occupation Computerized Coding System (NIOCCS) to assist in assigning occupational codes (called SOC codes) to text descriptions in this data set. The NIOCCS system is a free web-based application that uses machine learning, a form of Artificial Intelligence (AI), to assign SOC codes, SOC descriptions, and SOC probability for ITA cases submitted. Note that some late-submitted data received may not have SOC codes assigned. Data without SOC codes will have "0000" in the SOC_code field. OSHA reviewed 50% of NIOCCS-assigned SOC codes to determine accuracy. The variable soc_reviewed indicates when OSHA reviewed the NIOCCS-assigned code. If during review, OSHA determined that another code was more applicable, it assigned a new SOC code. Codes that were reassigned by OSHA are assigned a SOC_probability of 5, which does not reflect a probability score; it is an indicator value that reflects this reassignment. If NIOCCS could not assign a SOC code, or if OSHA determined that a SOC code could not be accurately assigned (such as due to vague job description, low NIOCCS probability, or NIOCCS determining there was insufficient information to assign a code) these entries were assigned a SOC code "9999" and a SOC_reviewed score of 2. For more information see the [ITA Data User Guide](#).

²OSHA used AI technology and some manual review to detect and remove information that could reasonably be expected to directly identify individuals directly from the narrative, open-text fields before making that data publicly available. The prefix "New_" was added to the original data element name to indicate the redaction of personally identifiable and sensitive medical information.

³OSHA collaborated with the Bureau of Labor Statistics (BLS) to use the [Survey of Occupational Injury and Illness \(SOII\)](#) autocoder to assign [Occupational Injury and Illness Classification System, Version 2.01 \(OIICS\)](#) codes for nature of injury, event or exposure, part of body, source of injury, and secondary source of injury based on information in the six ITA narrative fields. OIICS codes are organized as a four-digit tree-like hierarchical coding structure with parent-child relationships. However, OIICS codes assigned to the OSHA ITA data are limited to only two-digit OIICS codes. Furthermore, only "non-terminal" two-digit OIICS codes are assigned. OIICS "non-terminal" codes are those with three- or four-digit "child" codes. In the [OIICS Version 2.01 Manual](#), these codes are marked with an asterisk. Some two-digit OIICS codes may also be "terminal", meaning that they do not have three- or four-digit "child" codes; these "terminal" OIICS codes were not assigned and the data element will be blank. Out of 289 possible two-digit codes, 203 are non-terminal codes, which accounts for about 70% of the codes in the OIICS Version 2.01 Manual. While two-digit codes are less detailed than four-digit codes, they still allow for grouping of similar cases. Once grouped, data users can use the detailed narratives for analysis to identify trends and patterns in workplace injuries and illnesses, which can inform safety measures.
